

Roll Packaging Systems

AW-200RA

ROTARY ARM

Rugged, heavy-duty construction for demanding mill environments...

Accepts 20" diameter x 40" wide film supply rolls for longer run times...

The AW-200RA is an automatic, rotary arm Axial Packaging System engineered to provide a film package that totally encloses your roll. With a production rate of up to 60 rolls an hour, the AW-200RA offers a flexible system that can be installed as a stand alone wrapping station or incorporated into an existing production line or even placed in tandem with an HTW Series Radial Wrapper to provide an axial/radial package. Standard features include a load seeking cut and clamp, adjustable pre-stretch film delivery system and electronic tension. Can be configured as either a roll through or a side index system.

...a revolution in roll packaging!
